

- Input layer
 - Document format should be a agent task
- Image Verification Layer -
 - How to assess the image quality
 - Any threshold value setting for image quality
 - missing - after pre-processing image should go for quality assessment check
 - what happens if image quality is not matched to desired quality after pre-processing the image
- Document Analysis
- Workflow Selection Layer
 - What is workflow
 - is it differ by document type/client
 - are these seeded workflows>
 - What is the significance of Workflow Quality Assessment Management?
- Workflow layer
 - OCR processing Layer and Post Processing layer should go to AI agent
 - What is format detection after text correction?
- Text Verification Layer
 - How to assess the Quality of the text
 - Is this assessment per field or per document?
- Need to define the roles and responsibilities for
 - Manual processing
 - Administrator
 - Feedback Agent
 - Administrator Agent
 - Controller Agent
 - Optimization Layer
 - Agent Optimization
 - Workflow Optimization
- Is workflow same for original pdf and scanned image pdf
- Think about autonomous Agents
- Text should fetch from image using prompts
